

Dyno Test E • Comparing a Professional Products #54020 Typhoon manifold for the 5.0L Mustang to a TFS Track Heat and a Ford Cobra.

These tests were performed by an independent Mustang and Ford specialist and were not paid for by Professional Products. The #54020 Typhoon was substantially better than the Ford Cobra and slightly down from the Trick Flow Specialties Track Heat manifold. The Typhoon is better than the Track Heat in the lower rpm ranges and only starts to fall away from it at 5,700 rpm. However, the Typhoon typically retails for well under \$400 and the TFS retails for over \$500. The question is, do you want to pay over \$100 more for 6 extra hp peak to peak?

Professional Products - 332 HP @ 5800 rpm

Trick Flow Specialties - 338 HP @ 6000 rpm

Ford Racing Cobra - 322 HP @ 6000 rpm
